

Positioning for the Future, the Vision of the STSP

Leading Industrial Clusters to Go for Innovative Transformation

The STSPB will continuously enhance the development of the biotechnology, medical device, green and low carbon industrial clusters and plan and promote the smart bio-medical industry, the smart manufacturing industry, the aeronautic part industry, and establish maker space, open innovative problem solution platform, Southern Taiwan Innovative Startup Service Platform, and digital manufacturing center to include processes from manufacturing to creation to lead to innovative transformation.

Promoting Smart Governance Services

Smart services were provided from aspects such as transportation, governance, and sustainable environmental control including smart electric shuttle bus, smart traffic control center, management and monitoring of smart public equipment, smart environmental monitoring and control, smart buildings, smart shockproof, and wireless network.

Creating Friendly Environment

The STSPB will continuously create and maintain clean and healthy ecosystem in the STSP (for fireflies, birds, and butterflies) and promote the use of local food ingredients and harmony local life.
